

Service Development Framework for V7K Production

Idea Generation & screening

Before V7K Production became a specialized real estate and retail powerhouse, we explored several business models. As a creative team, we had the skills to do almost anything but we needed to find where those skills would yield the highest profit margins and the lowest client churn.

. The Broad Digital Marketing Agency

- **The Idea:** Offer a full suite of digital services (SEO, PPC, Social Media, Web Design) to any business that would pay us.
- **The Verdict: REJECTED.** The market is completely oversaturated. It forces you into a price war against low-cost freelancers, and clients view general marketing as an expense rather than an investment.

2. The Food & Beverage (F&B) Marketing Shop

- **The Idea:** Focus exclusively on Bangalore's booming restaurant, pub, and cafe culture, creating high-end food reels, menus, and launch campaigns.
- **The Verdict: REJECTED.** While highly visual and fun, the F&B industry has notoriously low marketing budgets one reason is because the taste of the food is the primary source of promotion, razor-thin profit margins, and incredibly high restaurant failure rates. It's hard to scale premium retainers here.

3. The General Video Production House

- **The Idea:** Operate purely as a creative production vendor shooting corporate videos, weddings, fashion portfolios, and commercial ads on a project-by-project basis.
- **The Verdict: REJECTED.** This is a transactional, feast-or-famine business model. You constantly have to chase new clients for one-off projects, and you are valued only for your equipment and editing time, not your strategic brain.

4. THE WINNING DIRECTION: REAL ESTATE & RETAIL GROWTH MARKETING

By combining elite visual production with consumer behavior consulting, V7K Production stepped out of the commodity trap. We focused exclusively on the two

highest-stakes sectors in Bangalore's economy: **Real Estate Developers** and **Commercial Retailers**.

When a single transaction or lease is worth millions, clients don't look for the cheapest creative vendor they look for the most reliable growth partner.

1. Real Estate Growth Marketing: Accelerating Sales Velocity

In the Bangalore residential and commercial market, holding onto unsold inventory is incredibly expensive. V7K engineered a framework to solve this specific problem.

- **Pre-Launch Psychology Campaigns:** We don't just launch ads when a building is finished. We build anticipation months in advance by targeting the specific psychological triggers of Bangalore's tech buyers (the desire for a sanctuary, a hybrid work environment, or multi-generational family security).
- **High-Intent Lead Funnels:** We replaced generic lead forms that attract unqualified clicks with deep qualification funnels. By integrating interactive visual walk-throughs and behavioral questionnaire filters, we ensure that a developer's sales team only spends time talking to highly qualified, high-net-worth individuals (HNIs) and NRI investors.
- **Cinematic Decompression Assets:** Standard walk-through videos feel cold and industrial. V7K produces cinematic, story-driven content that highlights the lifestyle showing the transition from a chaotic commute to a calm, low-density community oasis.

2. Retail Growth Marketing: Driving Footfall & Brand Domination

For major retail brands, shopping malls, and experiential commercial hubs across Bangalore (from Indiranagar high-streets to massive tech corridors), visibility equals survival.

- **Experiential Launch Campaigns:** We treat retail openings like major cultural events. Using high-impact, hyper-localized short-form video strategies, we build massive digital hype that translates directly into physical footfall on launch day.

- **Consumer Behavior Mapping:** We study how shoppers interact with spaces. We consult retail brands on their physical layout and digital messaging, ensuring their social media advertising mirrors the actual psychological experience of visiting the physical store.
- **B2B Retail Leasing Content:** We create high-value corporate conversion assets for developers looking to lease out massive commercial or mall spaces to top-tier international retail brands, proving the market viability of the location through data and premium visual storytelling.

Service Concept Development & Testing

The V7K Execution Engine:

V7K Production accelerates sales velocity for Bangalore's real estate and retail sectors through a tech-fueled, three-tier framework:

- **1. OctateAI Strategy Engine:** We eliminate creative guesswork. Using advanced prompt engineering frameworks via OctateAI, we instantly reverse-engineer buyer psychology to model hyper-specific personas and generate predictive, high-conversion video scripts.
- **2. Strategic Video Production:** We don't just make things look pretty; we build visual assets engineered to convert. We produce cinematic "decompression" lifestyle videos and modular short-form content designed to hit diverse buyer pain points simultaneously.
- **3. Performance Marketing:** We distribute assets through strict direct-attribution funnels. We dominate Meta and YouTube to funnel high-net-worth (HNI) and NRI buyers into qualified residential pipelines, while leveraging LinkedIn to secure high-ticket B2B developer and retail partnerships.

The V7K Advantage: By combining AI intelligence with elite visual execution, we slash client cost-per-lead (CPL) and turn content into a direct revenue driver.

1. AI-Powered Strategy: OctateAI Prompt Engineering

At the center of our consulting model is OctateAI. We don't guess what the Bangalore tech buyer or retail consumer wants—we reverse-engineer their psychology using advanced prompt frameworks.

- **Hyper-Specific Persona Modeling:** We use OctateAI to simulate deep consumer profiles, identifying the exact anxieties, financial hesitation points, and regional cultural triggers unique to local micro-markets (like Whitefield or North Bangalore).
- **Predictive Copywriting & Scripting:** OctateAI generates highly targeted video scripts, hook variations, and ad copy. This allows us to rapidly output diverse content variations designed to appeal to different psychological drivers (such as status vs. family security).

2. Strategic Video Production & Content Creation

Once OctateAI maps out the psychological blueprints, our production team brings them to life visually. We create cinematic assets engineered to convert, not just look pretty.

- **Cinematic Decompression Assets:** High-end video production that captures the feeling of escaping Bangalore's urban chaos into a calm, premium community oasis.
- **Modular Short-Form Content:** We shoot content structured to be broken down into dozens of hyper-focused social media reels, shorts, and structural walk-throughs, hitting different buyer pain points simultaneously.

3. High-Velocity Performance Marketing

Great content is useless without targeted distribution. We deploy our assets across key social media channels using strict direct-attribution funnels.

- **Meta & YouTube Domination (B2C Residential):** Using highly visual lifestyle narratives to target high-net-worth individuals (HNIs) and NRI investors, driving them into qualifying funnels that slash cost-per-lead (CPL).
- **LinkedIn & Targeted B2B Distribution (Retail & Commercial Leasing):** Reaching developers, corporate retail brands, and decision-makers with data-backed corporate growth case studies and premium property showcases.

Proof of Concept Validation

To validate the effectiveness of the OctateAI framework, V7K Productions executed an internal marketing campaign promoting its own services. Using AI-generated buyer personas, targeted messaging, strategic content production, and performance marketing distribution, the campaign generated qualified inbound inquiries, strong engagement metrics, and positive conversion signals. The results demonstrated the practical value of AI-assisted prompt engineering in accelerating marketing strategy development and campaign execution.

Marketing Strategy & Analytics

Performance marketing

job-title targeting

Our workflow:

1 Intent-first ad targeting. Right now your Meta/Google ads likely target broad interest audiences (real estate, property investment). Shift to job-title targeting (marketing heads, CMOs, VP Sales at developer firms) layered with behavioural signals people who've visited competitor agency pages, engaged with real estate content, or searched for project launch services. This alone cuts waste significantly.

2 Content as a lead gate. Instead of letting content just sit and build awareness, put your best assets (a micro-market analysis for Sarjapur Road, a developer marketing

audit template, a benchmark report on launch campaign CPLs) behind a form. Anyone who fills it out is already raising their hand. You get first-party data and a pre-qualified lead in the same moment.

3. Account-based outbound (ABM). With a mixed inbound-outbound model, you're well-positioned for this. Pick 10–15 target accounts Puravankara, Prestige, Brigade, Godrej Properties and run coordinated campaigns: custom content addressing their specific pain points, LinkedIn outreach from the V7K team, and retargeting ads for anyone from those companies who's visited your site. It's surgical versus shotgun.

4. Hard MQL gate. Not every inbound lead should hit your sales team. Score leads on three factors: do they have budget authority, a live project or launch in the pipeline, and a decision timeline within 90 days? Anyone who doesn't meet the threshold goes into a nurture drip. Anyone who does gets a proper sales brief with case studies and a clear next step.

The payoff is fewer leads that go nowhere and a sales team that only spends time on conversations that can actually close. Want me to build out the ABM target list for Bangalore developers or design the MQL scoring rubric?

Analytics :

Awareness — you're measuring reach, CPM, and brand search volume. The question is: are the right people seeing you? A Puravankara CMO seeing your LinkedIn post or YouTube ad is worth more than 10,000 random impressions.

Consideration CTR and time on page tell you if interest is genuine. If someone visits your site, reads a case study, and downloads a report that's a consideration-stage signal. Retargeting engagement is the key metric here because it shows who came back.

Demo this is where most agencies lose the plot. You need to track not just how many demo calls happen, but show-up rate (how many actually attend), and demo-to-proposal conversion. Objections logged during calls are gold for refining your pitch over time.

Conversion proposal-to-close percentage is the single most honest metric in the funnel. Deal velocity (how many days from first contact to signed contract) tells you how efficient your sales process is. Win/loss reasons tell you what to fix.

Loyalty NPS and CSAT after the first 90 days of engagement tell you if delivery matches the promise. Upsell revenue is the best proof of a satisfied client they give you more budget because you earned it. Referral rate is the highest-trust signal of all.

CRM is the backbone that ties everything together. It's not a stage you pass through it runs underneath all six stages, recording every touchpoint, scoring every lead, and giving you pipeline health visibility at any moment.

Stage	What you measure	Channel	Tool
Awareness Top of funnel Build visibility	Reach · Impressions CPM · Share of voice Brand search volume Video view rate	Meta · Google YouTube · LinkedIn Content SEO	Meta Ads Manager Google Ads GA4 · Search Console
Consideration Mid funnel Build interest	CTR · Time on page Pages per session Content downloads Retargeting engagement	Retargeting ads Email nurture LinkedIn content	GA4 · Hotjar Mailchimp LinkedIn Analytics
Demo High intent Show capability	Demo requests Show-up rate Demo-to-proposal % Objections logged	Discovery call Case study deck Audit presentation	Calendly · Zoom CRM pipeline Notion · Slides
Conversion Decision stage Close the deal	Proposal-to-close % Deal velocity (days) CAC · Contract value Win/loss reasons	Proposal deck WhatsApp follow-up Reference calls	HubSpot · Zoho DocuSign Razorpay / invoicing
Loyalty Post-conversion Retain and grow	Retention rate NPS · CSAT score Upsell revenue Referral rate	Monthly reviews Performance reports Upsell proposals	Typeform · NPS Slack / WhatsApp Looker Studio
CRM Full lifecycle Data backbone	Pipeline health LTV · Churn rate Revenue per client Touchpoint history	Automated flows Lead scoring Pipeline stages	HubSpot CRM Zoho · LeadSquared Looker Studio dash

Service Design & Development

Client Acquisition :

V7K Productions Framework

Research (finding for our target audience and understanding their market)

↓

Segmentation (segmenting the market mid range developers – luxury)

↓

Targeting (micro targeting them or niche targeting)

↓

Content Strategy (building a campaign for v7k production aligning with their pain points solution)

↓

Personal Reels (personal reels targeting our prospects)

↓

Creative Design (creating graphic Designs targeting our prospects)

↓

Targeted Ads (boost with mets ads)

↓

Lead Generation (Generate MQL Marketing qualified leads)

↓

Sales Conversion (generate SQL Sales qualified leads)

↓

Optimization & Scaling (repeating the process)

NEXT STEP :

CLIENT OPERATIONS

STEP-1 Developer Interview & Validation Process

Minimum 2 iterations of interview with the developer.

Objective:

Extract complete project intelligence using smart framework question

STEP-2 Customer Behaviour & Psychology Analysis

Objective:

Understand buyer behaviour patterns and psychology in Bangalore

STEP 3 - Funnel Creation For The Campaign

Awareness – Consideration / Trust – Demo – Conversion – Loyalty

STEP 4 - Align Developer USP To Buyer Pain Points

Objective:

Align project strengths directly to buyer pain points in every stage of the funnel.

STEP 5 - Content Approval, Posting & Campaign Analysis

Approval:

Content approval will be handled by Operations Team.

INTERNAL CAMPAIGN OPERATIONS

Audience Research (Octate AI)

Strategic Content Planning (octateai)

Client Approval

Cross-Functional Coordination

Script Writing

Production

Editing & Design

Quality Check

Client Delivery

Performance Analysis

Test marketing

PILOT TEST :

₹6K ad spend → ₹35K client closure (pilot validation) LTV 2 Months

Channel Strategy:

Meta Ads = primary execution + proof engine

Instagram = authority + case study + credibility building

LinkedIn = direct developer outreach + decision-maker targeting

Referrals (architects, brokers, channel partners) = emerging high-value channel

Delivery System

Already tested with 3 real estate clients = validation stage

Next requirement = standardization:

fixed ad frameworks (launch / urgency / inventory)

fixed funnel structure

fixed reporting format

Separate roles for scaling:

strategy/sales = you

execution = team/system

Launch

1) Launch Method

Launched V7K services via **value-based content**

Platforms used:

Instagram (primary)

LinkedIn (secondary)

2) Content Strategy

Focus: **strategic value creation posts**

Type of content:

marketing insights

real estate growth breakdowns

funnel/system explanations

case-style learning posts

3. Position statement :

We are a growth partner for real estate developers, building performance-driven systems that generate qualified leads, site visits, and pre-bookings.

4) Current State

Early inbound traction system active

Pilot-based sales motion supported by content credibility

Still in validation → early scaling phase
